# US Bank Integration 2.0

This is the restarting of the US bank integration project with better quality data compiled from WRDS.

## Directory Management

First we need to be able to navigate the directory where data are stored.

```r
data_folder_path <- "../Data_Bank_Int/"
file_path <- paste0(data_folder_path, "SICCD_6000_6999_20171031.csv")
```

## Tidy Reading

After navigating to the relevant folder, one needs to be able to read the data file, stored in this case, with a `.csv` extension.

```r
data <- readr::read_csv(file_path,
                        na = c("", "NA", "NaN", "C", "B"),
                        col_types =
                          cols(`Cumulative Factor to Adjust Shares/Vol` = col_double(),
                               `Cumulative Factor to Adjust Prices` = col_double(),
                               `Factor to Adjust Price` = col_double(),
                               `Factor to Adjust Shares` = col_double(),
                               `CUSIP Header` = col_character(),
                               CUSIP = col_character()
                               ))
```
